2.1.1 Detailed Description

AirDC - Library for Basic Air Data calculations Created by J.L.J., December 3, 2015. Refer to http://www.basicairdata.eu

2.1.2 Constructor & Destructor Documentation

2.1.2.1 AirDC()

```
AirDC::AirDC (
          int pid )
```

AirDC Default constructor

2.1.3 Member Function Documentation

2.1.3.1 IAS()

```
void AirDC::IAS (
          int mode )
```

Calcualtes Indicated Airspeed IAS=ASI=EAS

Parameters

Мо	ode	Indicates the calculation method. 1 is Basic Air Data default
		http://www.basicairdata.eu/pitot-tube.html
		https://en.wikipedia.org/wiki/Equivalent_airspeed

Returns

Void

2.1.3.2 ISAAltitude()

```
void AirDC::ISAAltitude (
          int mode )
```

Calculates barometric altitude with ISA atmosphere

Parameters

Mode	1 Uncorrected altitude above mean sea level	
	http://www.basicairdata.eu/altimeter.html	
Mode	2 Corrected above mean sea level altitude, pressure at sea level should be available,	
	https://en.wikipedia.org/wiki/QNH	

Returns

Void

2.1.3.3 OAT()

```
void AirDC::OAT (
          int mode )
```

Calculates Outside Air Temperature

Parameters

Mode	Indicates the calculation method. 1 is Basic Air Data default
	https://en.wikipedia.org/wiki/Total_air_temperature

Returns

Void

2.1.3.4 OutputSerial()

Output formatter

Parameters

Mode	1 Measurements output
Mode	2 Air data output
Mode	3 Measurements uncertainty output
Mode	4 Air data uncertainty output
Mode	51 Output for Temperature Logger Example

Returns

Void

2.1.3.5 PitotCorrection()

Correct TAS based on pitot placement

Parameters

Mode	1 No compensation
Mode	2 Steady state(no angular acceleration) assumed for this method
	http://basicairdata.blogspot.↔
	it/2014/07/pitot-correction-for-position-and.html

Returns

Void

2.1.3.6 Red()

```
void AirDC::Red (
          int mode )
```

Calculates Re number

Parameters

Mode	1 Uses d as reference dimension
111000	1 0000 _4 40 1010101100 4111101101011

Returns

Void

2.1.3.7 RhoAir()

```
void AirDC::RhoAir (
          int mode )
```

Calculates the Air Density

Parameters

Mode	Indicates the calculation method. 1 is Basic Air Data default
	http://www.basicairdata.eu/calculation-routines.html

Returns

Void

2.1.3.8 Viscosity()

Calculates Air Viscosity

Parameters

Mode	1 Calculate viscosity with Sutherland's formula, note that output is multiplied by a 10e6 factor
Mode	2 Calculate viscosity with Sutherland's formula

Returns

Void

2.1.4 Member Data Documentation

```
2.1.4.1 _AOA
double AirDC::_AOA
Angle of Attack, rads
2.1.4.2 _AOAdot
double AirDC::_AOAdot
Time derivate of AOA
2.1.4.3 _AOS
double AirDC::_AOS
Angle of Sideslip, rads
2.1.4.4 _AOSdot
double AirDC::_AOSdot
Time derivate of AOS
2.1.4.5 _CAS
double AirDC::_CAS
Calibrated Air Speed m/s
2.1.4.6 _d
double AirDC::_d
Reference length for Re number calculation
2.1.4.7 _h
double AirDC::_h
Altitude
2.1.4.8 _IAS
double AirDC::_IAS
```

Indicated Air speed m/s

```
2.1.4.9 _lp
double AirDC::_Ip
Pitch rate
2.1.4.10 _lq
double AirDC::_Iq
Roll rate
2.1.4.11 _lr
double AirDC::_Ir
yaw rate
2.1.4.12 _M
double AirDC::_M
Mach number
2.1.4.13 _mu
double AirDC::_mu
Dynamic Viscosity
2.1.4.14 _p
double AirDC::_p
Static Pressure Pa
2.1.4.15 _pid
int AirDC::_pid
Class ID
2.1.4.16 _PitotXcog
double AirDC::_PitotXcog
Distance along x body axes of the Pitot tip
```

```
2.1.4.17 _PitotYcog
double AirDC::_PitotYcog
Distance along y body axes of the Pitot tip
2.1.4.18 _PitotZcog
double AirDC::_PitotZcog
Distance along z body axes of the Pitot tip
2.1.4.19 _pSeaLevel
double AirDC::_pSeaLevel
Value of pressure at sea level
2.1.4.20 _qc
double AirDC::_qc
Differential pressure at Pitot, Impact pressure minus static pressure Pa
2.1.4.21 _Re
double AirDC::_Re
Reynolds Number
2.1.4.22 _RH
double AirDC::_RH
Relative Humidity
2.1.4.23 _Rho
double AirDC::_Rho
Air Density kg/m<sup>3</sup>
2.1.4.24 _T
double AirDC::_T
```

Temperature K

```
2.1.4.25 _TAS
double AirDC::_TAS
True Air Speed m/s
2.1.4.26 _TASPCorrected
double AirDC::_TASPCorrected
True Air Speed, corrected m/s
2.1.4.27 _TAT
double AirDC::_TAT
Total Air Temperature
2.1.4.28 _uCAS
double AirDC::_uCAS
CAS uncertainty
2.1.4.29 _uh
double AirDC::_uh
Altitude uncertainty
2.1.4.30 _ulAS
double AirDC::_uIAS
IAS uncertainty
2.1.4.31 _up
double AirDC::_up
Pressure uncertainty
2.1.4.32 _uqc
double AirDC::_uqc
```

Differential pressure uncertainty

```
2.1.4.33 _uRH
```

double AirDC::_uRH

Relative Humidity uncertainty

2.1.4.34 _uRho

double AirDC::_uRho

Air density uncertainty

2.1.4.35 _uT

double AirDC::_uT

Temperature uncertainty

2.1.4.36 _uTAS

double AirDC::_uTAS

TAS uncertainty

2.1.4.37 _uTAT

double AirDC::_uTAT

TAT uncertainty

The documentation for this class was generated from the following files:

- AirDC.h
- AirDC.cpp
